Elk Conservation District Tree Sale 2018 Description and Details

APPLE TREES

Crimson® Gold is a disease resistant cultivar harvesting the second week in September, just ahead of Golden Delicious. The fruit colors nicely with a near full red-orange blush on a yellow background and the flesh is white, firm and juicy. Apples are medium in size with a sweet-tart flavor. Fruit has storage life of up to eight months. The trees have medium vigor and are very productive, so they should be thinned accordingly. Crimson® Gold is very resistant to apple scab.

Granny Smith is a late, green, tart apple, maturing in early November. Develops a red blush in the Northeast. High-quality eating apple with a storage life equal to Fuji.

Shizuka is a sister to Mutsu developed in Japan. Reported to be blister spot resistant. Fruit is large like Mutsu, but has a milder, sweeter flavor. Shizuka matures two weeks before its sister and exhibits less bitter pit. Tree vigor appears to be similar to that of Mutsu. This has become an important variety for many direct market growers.

Yellow Transparent is an apple ripening the first week in July. The fruit is tender, juicy and mildly acid, making it a favorite for homemade applesauce. Trees are upright, vigorous and very precocious, however tend to be biennial. Yellow Transparent is an early blooming variety and can pollinate all other early blooming apple varieties as well as varieties with mid-season bloom times.

Cortland is a McIntosh x Ben Davis cross that inherited the good qualities of both parents. Fruit is a beautiful red, very large, with pure white flesh. Crops heavier than most varieties and considered an annual bearer. Picked seven to ten days after McIntosh.

Gale® Gala develops a 90-100% full red color with deep red striping allowing harvest in one or two pickings. The finish is very clean. Fruit size, firmness and eating quality are equal to other Gala sports. Matures early September. Gale® Gala blooms in mid-season and will pollinate all other early blooming apple varieties, varieties blooming in the middle of the season, and also varieties blooming late in the season.

PEACH TREES

Redhaven is considered by many as the standard for the Northeast peach industry. Tree is vigorous, very bud-hardy and productive. Fruit is medium-sized and colors to a brilliant red. One of the best commercial varieties. Ripens around August 1 in south-central Pennsylvania.

John Boy has now claimed a prominent status as a commercial peach variety. Fruit is of very high quality ripening early August, ten to fourteen days before Loring with better color. Fruit is large and very firm. The tree is vigorous and productive with good resistance to bacterial leaf spot.

PLUM TREES

Methley is an early plum with fine quality and appearance. The fruit is purple with red, sweet flesh and very juicy with a distinctive flavor. Ripening in early to mid-July, Methley is self-fertile and a good pollinizer for Shiro.

Stanley is a New York State Agricultural Experiment Station introduction and leading cultivar in the Great Lakes region. A fine prune-type plum with excellent quality suited for both home use and processing. Fruit is large in size with dark blue skin. Flesh is greenish-yellow, juicy and fine-grained. The tree is early bearing and a good pollinizer for other European varieties.

PEAR TREES

Shenandoah is the latest season European cultivar, harvesting mid-September. Fruit size is large with traditional sub-acid pear flavor. Blight resistance is good. Shenandoah stores very well for up to 5 months without breakdown.

Potomac is a Moonglow x Beurre D'Anjou cross developed by the USDA and The Ohio State University. The fruit is moderate size, averaging 2-1/2". The flesh texture is moderately fine and buttery. The flavor is pleasingly sub-acid with mild aroma and is similar to Beurre D'Anjou in character. The tree is moderately vigorous and resistant to fire blight. Matures early September.

Elk Conservation District Office

Clay County Court House

Summersville Federal Building

Webster County Extension Office

Raspberries

Heritage- Ever-bearing top-quality fruits and heavy yielding, starts cropping early in summer on old canes, then continues bearing even more heavily on new canes through fall. The red berries are large and flavorful. Plants are 1/4" & up at collar.

Jewel- Black Raspberries, hardy and reliable. Glossy fruits ripen in midseason, show desirable firmness and excellent flavor. Good yields in shade and just about any soil type. Plants are 3/16" & up at collar.

Blackberries

Arapaho - A self-supporting thornless blackberry; grows in huge clusters that ripen over a long season. Plants are 3/16" and up at collar.

Blueberries

In spring (middle of May) the blueberry bush has many white bell-like blossoms and will have ripe berries from the middle of July through August. Through the summer months the plant has dark green wax-like foliage. In fall leaves will turn a beautiful crimson color, and during winter months the light green or reddish colored wood provides winter color. Recommend planting two varieties for increased yield and larger berries. Plants are 12 - 18".

Strawberries

Jewel - June bearing, midseason, a large, firm berry with very good flavor..

NOTE: The replacement guarantee is limited to 60 days.

PLANTS ARE SOLD "BARE ROOT". Any delay in picking up plants will reduce the chances of survival!
