Southern Conservation District Community Outreach

This project will work with conservation district supervisors, community groups, water and soil volunteer groups to enhance partnerships providing education, strategies and financial options to remediate soil and water concerns related to agriculture as well as point/non-point solution. This includes agricultural concerns of every kind which might include exclusion fencing, alternating feeding sites, best management practices where animal, agricultural and human contaminations may be of concern. The VISTA will help supervisors prioritize projects and seek funding to remediate environmental concerns. Project will also create and updated database of all the education providers and other community organizations so that we can create a volunteer management system that will integrate clean water strategies in our region. The VISTA will accompany supervisors to community events and aid supervisors in presenting material related to district goals. Photography and developing press releases will be a part of our community outreach. VISTA will create or discover conservation related literature that will be distributed district wide which would include pollination programs, soil stewardship, local school demonstrations and assistance to schools in the WVACD poster and photo contest.
